

Easily adhere to protocols

Get **StudyTeam™ eSource**: electronic source forms designed for your trials

OneStudyTeam creates eSource forms for you, based on your trial's protocol and your site team's custom needs. Using these electronic documents, you can more effectively capture and manage source data while increasing accuracy.

StudyTeam eSource, unlike paper, offers guidance to ensure that study procedures are performed correctly, and it offers built-in protections to ensure that there are no missed steps. Not only is this faster and more efficient, but digital data entry enables you to reduce errors to ensure optimal trial outcomes.

What is StudyTeam eSource?

A secure storage system

StudyTeam eSource organizes source data into electronic patient binders that are built into the StudyTeam platform, where you manage patient enrollment.

A more efficient, flexible workflow

Use both StudyTeam eSource and paper as needed. Scan QR codes to digitize paper source templates and upload multiple documents at once, automatically categorizing them.

An automatic audit trail

Maintain a full audit history of uploads, signatures, and changes, timestamped and attributed to individual users.

Special features

Ability to upload multiple documents at once

Organize multiple document types within a single upload.

Data-error alerts

Preset ranges for patient data help prevent errors.

Role-based access

Enable PI review. Grant monitors remote access to source data. Provide monitors and auditors access to audit logs.

Visit progress bar

Quickly determine if a source document is missing using a visit progress bar.
